Methods

- Traditional Method
 - Essay appraisal
 - Graphic rating scale
 - Field review
 - Ranking method
 - Paired Comparison Method
 - Forced Distribution Method
 - Critical Incident Method
 - Checklist Method
 - Forced choice Method

- Modern Method
 - 360 degree appraisal
 - Assessment Centre
 - Management by objectives
 - BARS
 - HRA
 - Balanced scorecard

Essay Appraisal

- It is the simplest form where the rater writes or is asked to write covering individual strengths, weaknesses, potentials and so on.
- It is qualitative technique of appraisal.
- The biggest drawback is its variability in length and content.
- Since different essays touch on different aspects of performance, it becomes difficult for comparison.

Graphic Rating Scale

- It is the most simplest and most popular technique.
- The scale lists traits, such as quality and a range of performance values (from unsatisfactory to outstanding for each trait).
- The supervisor rates by checking the score that best describes his or her performance for each trait.
- The assigned values for the traits are then totaled.
- Merits:
 - Easy to construct, understand & use.
 - In expensive as traits are defined without any ambiguity.
- Demerits:
 - Very high degree of subjectivity.
 - Easy to manipulate.

Per	formance Appr	aisal				
Emp	oloyee Name		Title			
-	-			Employee Payroll Number		
Rea	son for Review:	🗌 Annual	Promotion	 Unsatisfactory Performance 		
		Merit	End Probation I	Period 🗆 Other		
Dat	e employee began	present position/	/			
Ins: indi	tructions: Carefu cate the employee	's performance. Indicate	s work performance N/A if not applicab	uled appraisal date/ in relation to current job requirements. Check rating box t de. Assign points for each rating within the scale and indicate i for an overall performance score.		
			RATING IDEN	TIFICATION		
O_ and	-Outstanding—I is recognizable a	Performance is exception s being far superior to a	nal in all areas mhers.	I—Improvement Needed—Performance is deficient in certain areas. Improvement is necessary.		
requ	•Very Good—Re virements. Perform a consistent basis.	sults clearly exceed mos ance is of high quality o	t position ind is achieved	U—Unsatisfactory—Results are generally unacceptable and require immediate improvement. No merit increase should be granted to individuals with this rating.		
G_ Mee	ets performance st	nt and dependable leve andards of the job.	-	N—Not Rated—Not applicable or too soon to rate.

Graphic Rating Scale with Space for Comments

Figure 9–3

Field Review

• A member of the personal or central administrative staff meets small group of rater from each supervisory unit and goes over each employee's rating with them to :

(a) identify areas of inter-rater disagreement(b) help the group arrive at concensus(c) determine that each rater consists the standard similarly.

- It tends to be more fair and valid,
- On the negative side the process is more time consuming.

Ranking Method

- Employees are compared directly against one another.
- It is easy to explain, understand & use.
- The simplest ranking procedure is straight ranking in which the evaluator arranges employees in order from best to worst on the basis of their overall performance.
- A variation to it is alternate ranking ,where the evaluator first ranks the best employee, next the worst employee, then the second best, then the second worst, and so on until all employees are ranked.

Alternation Ranking Scale

ALTERNATIO	N RANKING SCALE
For the Trait:	
employee's name on line 1. Put the lowest-	employees you want to rank. Put the highest-ranking ranking employee's name on line 20. Then list the est ranking on line 19, and so on. Continue until all
Highest-ranking employee	
1	11
2	12
3	13
4	14
5	15
ó	16
7	17
8	18
9	19
10	20
	Lowest-ranking employee

Figure 9–6

Paired-Comparison Method

 Ranking employees by making a chart of all possible pairs of the employees for each trait and indicating which is the better employee of the pair.

Ranking Employees by the Paired Comparison Method

Employee Rated:					Employee Rated:						
As Compared to:	A Art	B Maria	C Chuck	D Diane	E José	As Compared to:	A Art	B Maria	C Chuck	D Diane	E José
A Art		+	+	_	-	A Art		_	-	_	_
B Maria	-		-	-	-	B Maria	+		-	+	+
C Chuck	-	+		+	-	C Chuck	+	+		-	+
D Diane	+	+	-		+	D Diane	+	_	+		-
E José	+	+	+	-		E José	+	-	-	+	

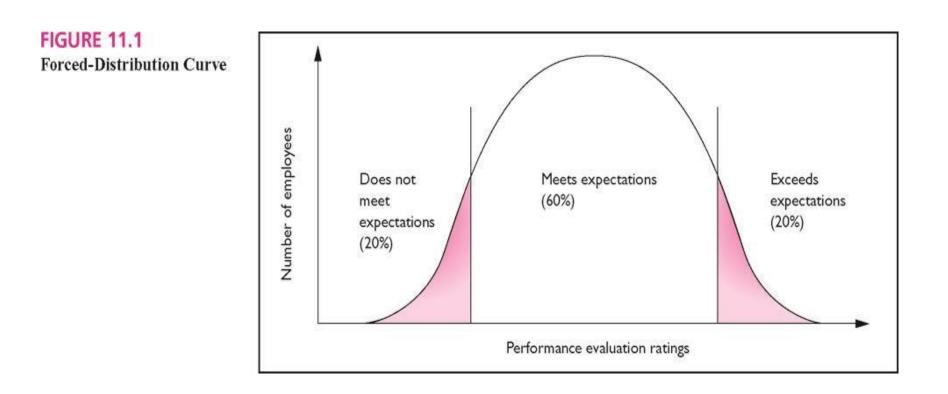

Note: + means "better than." – means "worse than." For each chart, add up thenumber of 1's in each column to get the highest-ranked employee.

Figure 9–7

Forced Distribution Method

- It operates under an assumption that employee performance level conforms to a normal statistical distribution.
- It seeks to overcome the problem by compelling the rater to distribute the ratees on all points on the rating scale.
 - Example:
 - 15% high performers
 - 20% high-average performers
 - 30% average performers
 - 20% low-average performers
 - 15% low performers
- It is assumed that employee performance levels conform to a bell-shaped curve.
- Merit: eliminates the error of leniency.
- Demerit: Affects employee morale.

Forced-Distribution Curve

Critical Incidents Method

- Here the supervisor keeps a log of positive and negative examples of a subordinate's workrelated behaviour.
 - Advantages:
 - Provides actual examples of good and poor performance .
 - Ensures that the supervisor thinks about the subordinates appraisal all during the year.
- Disadvantages:
 - Supervisor need to jot down.
 - Delay feedback to employees.

Examples of Critical Incidents for an Assistant Plant Manager

Continuing Duties	Targets	Critical Incidents
Schedule production for plant	90% utilization of personnel and machinery in plant; orders delivered on time	Instituted new production scheduling system; decreased late orders by 10% last month; increased machine utilization in plant by 20% last month
Supervise procurement of raw materials and inventory control	Minimize inventory costs while keeping adequate supplies on hand	Let inventory storage costs rise 15% last month; overordered parts "A" and "B" by 20%; underordered part "C" by 30%
Supervise machinery maintenance	No shutdowns due to faulty machinery	Instituted new preventative maintenance system for plant; prevented a machine breakdown by discovering faulty part
		Table 9–1

Checklist Method

- Here rater is given a list of job-related characteristics or behaviours and is asked to check the items that are typical of a particular employee.
- Relative weights are then calculated.

TABLE 11.5 Sample Checklist Questions		Yes	No
sample cheekinst Questions	1. Does the employee lose his or her temper in public?		_
	2. Does the employee play favorites?	_	_
	3. Does the employee praise employees in public when they have done a good job?	_	_
	4. Does the employee volunteer to do special jobs?		_

Forced-choice Method

 Here the items are assembled in pairs and the rater has to choose the item that is more characteristic of the employee.

 The pairs are designed so that both items appear equally good or bad to the rater, but only one is related to actual job performance.
